Part A: Use the chart to record your results.

	Red	Green	Yellow
Tallies			
Total number			

Part B: Make a picture graph.

A graph is a display which helps us to share data, or information. The title of the graph tells us what type of information we can find on the graph. It is usually at the top of the graph. Labels on the graph tell us the specific information we recorded. A picture graph uses pictures or symbols to show data.

- Label the colors of apples in the left column of the graph.
- To the right of each color word, draw one colored apple for each apple in the color set.
- Give the graph a title and labels.
