Part A: Measure to find the perimeter.

The perimeter of a shape is the distance around it. When we calculate the perimeter of a rectangle we add the length plus length plus width plus width. The length is the longer side. When a shape is not a rectangle the sides are not called length and width. They are called edges or sides. The perimeter of a shape is the sum of all the edges. The sum is the answer when adding numbers, amounts, or items.

1. Find the perimeter of this rectangle. Measure in inches. Label the answers.

length = _____ (Label the answer.)

width = _____ (Label the answer.)

length + length + width + width = _____ (Label the answer.)
